

# Quarantine Wellness Panel

## An All-inclusive Snapshot of an Individual's Health

QLS is proud to offer a full Quarantine Wellness Panel including COVID-19 antibody testing! Due to the COVID-19 pandemic, most of our friends and family have been stuck inside their homes for weeks. During these trying times, it is natural to wonder if one's health has suffered because people haven't had the ability to visit their doctor.

The Quarantine Wellness Panel provides physicians with an all-inclusive snapshot of an individual's health, allowing the doctor to quickly see how the quarantine has affected a patient's overall health. If one has been exposed to lead or other metals while sheltering in place in an older building, the Quarantine Wellness Panel will show it. If one has not been getting enough exercise, our panel will indicate any adverse cardiovascular effects. If one has not been outside enough in recent weeks, our panel will test for vitamin D. Most importantly, the panel also includes our high sensitivity/high specificity, FDA-approved SARS-Cov-2 antibody test.

Our Quarantine Wellness Panel provides doctors and patients with a comprehensive collection of tests focusing on cardiovascular, hormonal, glandular and overall health. Featuring the COVID-19 antibody test along with 20 other tests/panels, our Quarantine Wellness Panel includes male and female hormone tests, a full heavy metals panel, heart-healthy cardiovascular tests, and important vitamins.
